Notes:

¹ probably misidentified *Batyraja spinacauda*

² according distribution in the Melo et al., 2009

³ according Mecklenburg et al., 2010

⁴ *Sebastes marinus* (Linnaeus, 1758) is still used in scientific literature and management

⁵ difficult to determine to species level

⁶ this species needs verification in the Barents Sea

⁷ the genus is under revision (Chernova 2006), since 2007 only recorded to genus level on Norwegian boats, Russian boats determined to the species level, using taxonomy before Chernova 2006, three species *C. reinhardtii*, *C. microps*, *C. ramula*

⁸ uncertain species identification for many species in this family, especially on Norwegian boats before 2007

⁹ this genus is under taxonomic revision

¹⁰ difficult to determine to species level, all recordings in this family has been pooled with *Ammodytes marinus* (*A. tobianus* found very seldom)
