MPA’s are a good fisheries management tool and fisheries will benefit from them.
MPA’s should primarily be managed by the government

Agree

Disagree
Scientists are the real beneficiaries of MPA’s
Many MPAs are designed to benefit tourism and other economically powerful sectors, denying access of local communities to the "commons"
Size matters!

Agree

Disagree
Too many parties are involved in discussing governance of MPA’s
MPA’s are only one of many tools in the toolbox for management of aquatic resources
With good fisheries policy, MPA’s aren’t necessary
There can not be one singular framework for MPA’s, due to different circumstances around the world
MPA’s are inevitable!
In designing MPA’s, the P from Planet should be more important than People and Profit
FAO is the only organisation that should be allowed to give directives/frameworks for MPA’s
The fishing industry shouldn’t be part of the MPA discussion, since it is (partly) responsible for the problem.
Fishermen should be part of the solution. Without compliance nothing will be achieved!
